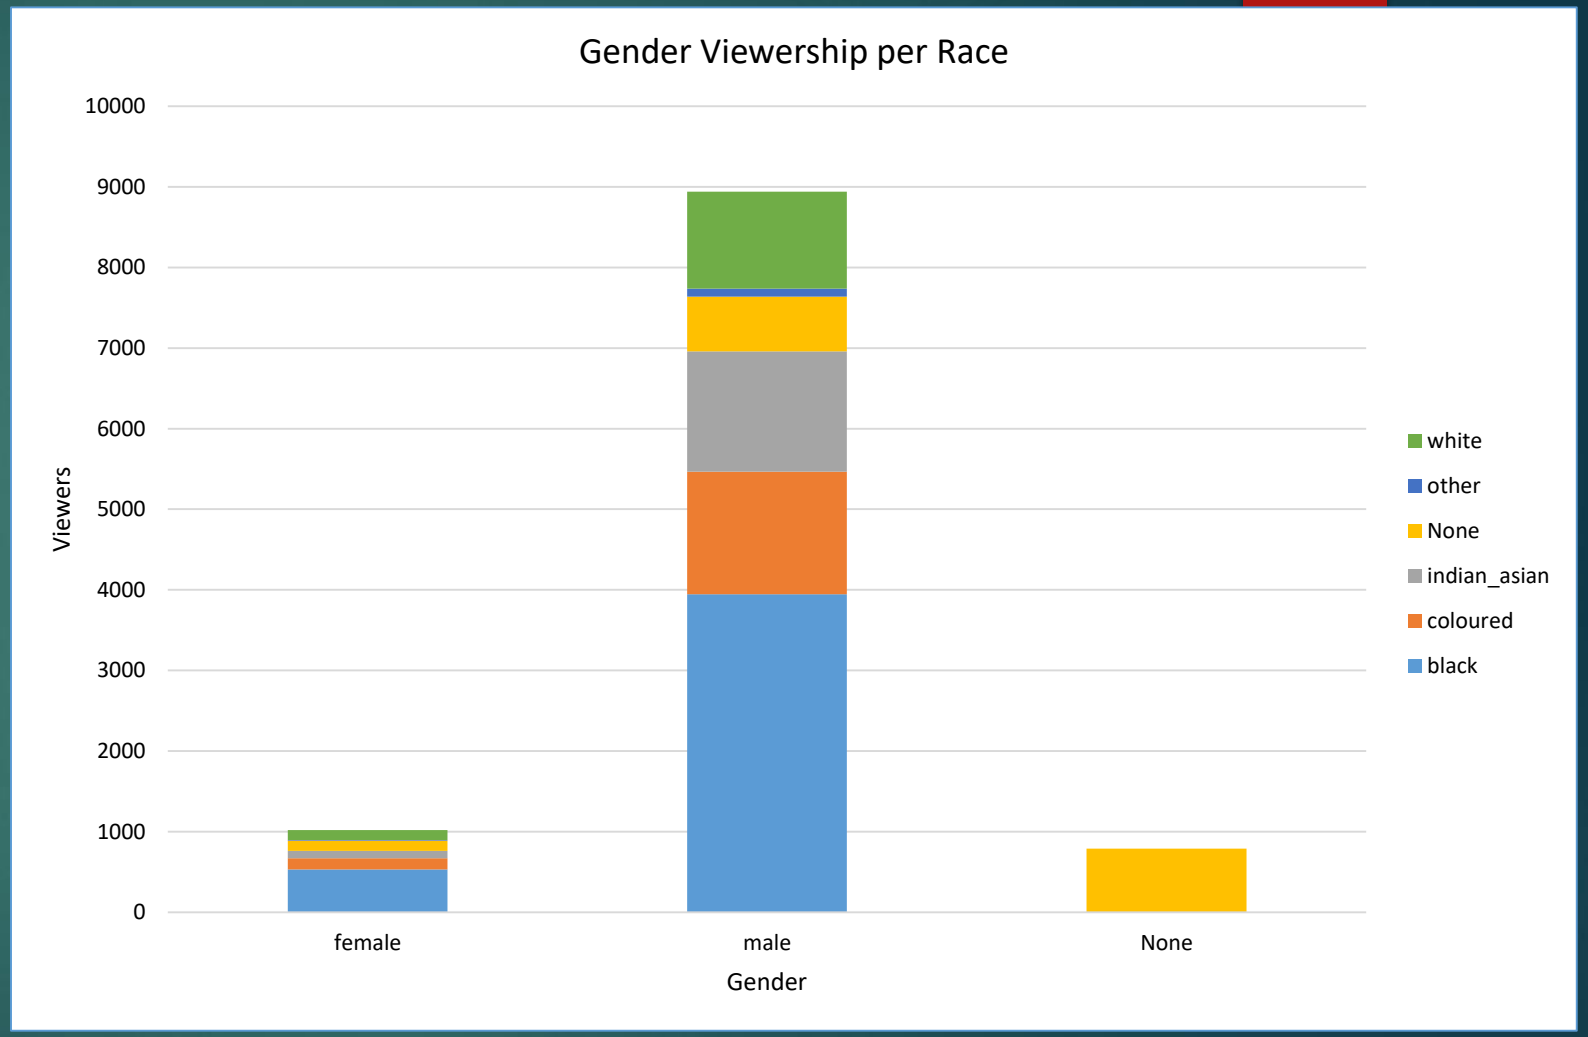
BrightTV Data Analysis Presentation

BY MUZI TSOBOLO

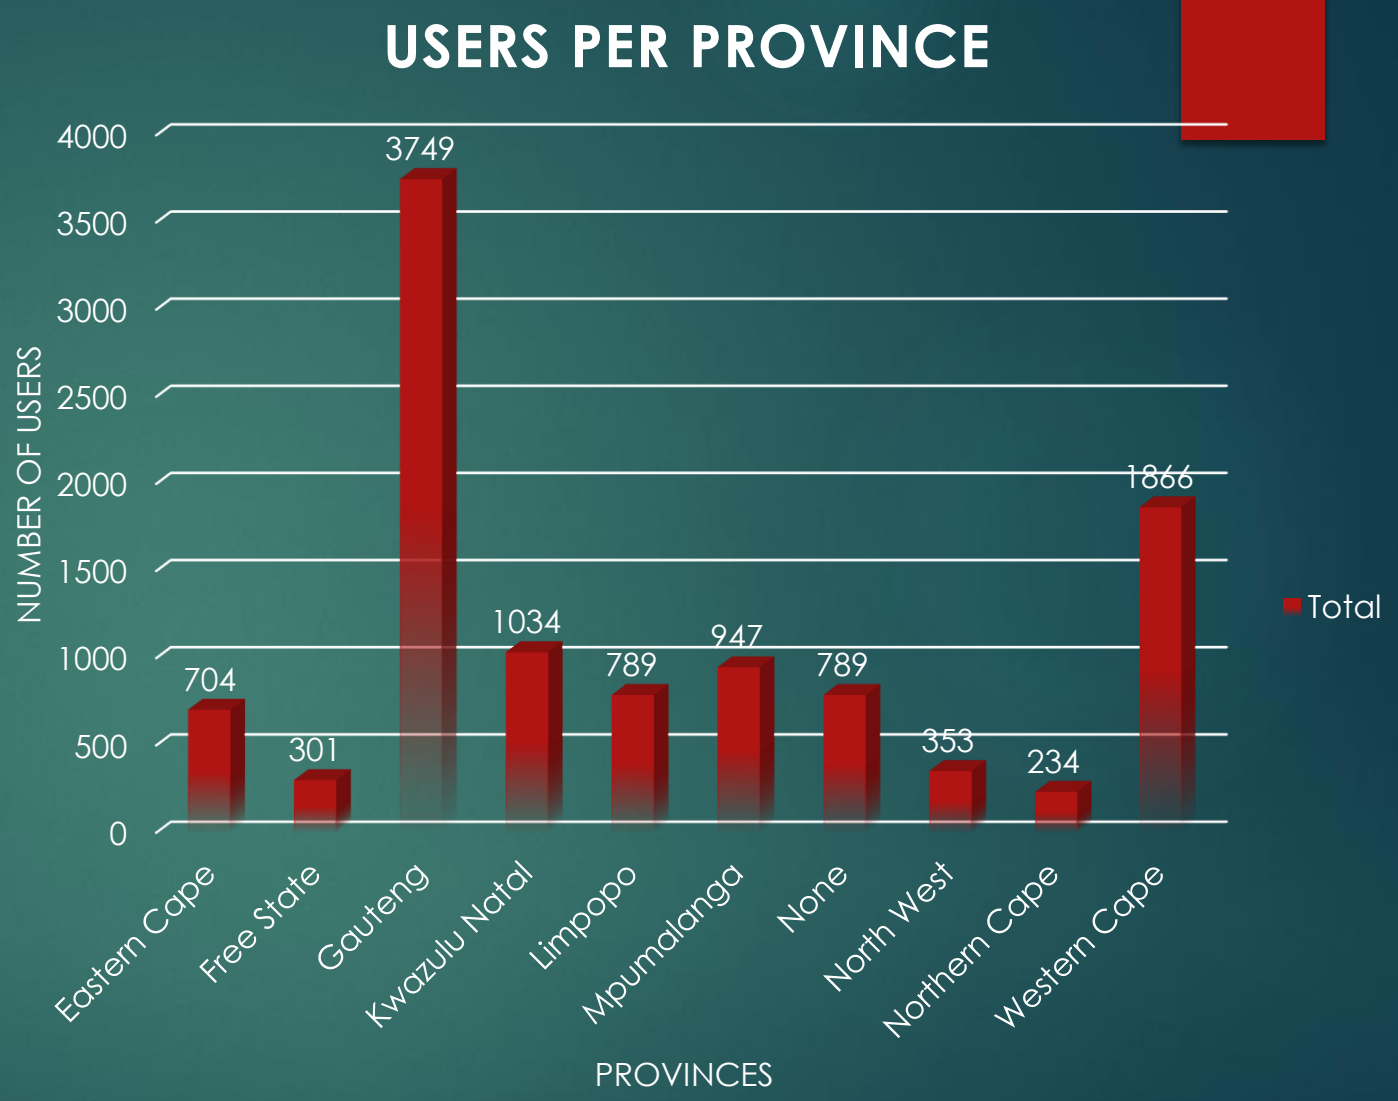
User by Race and Gender

- The user base has a high number of males with black males leading with 3946 followed by Coloured((1519), Asian(1494), White(1202) users.
- In the female gender category Black female are dominating with (532), Coloured (138) in second, then white (127) users profiles.
- There are 135 females and 780 males user profiles who did not specified their races listed as none and other.
- Then is also 789 user profiles who are listed as none because they did not enlist their gender.

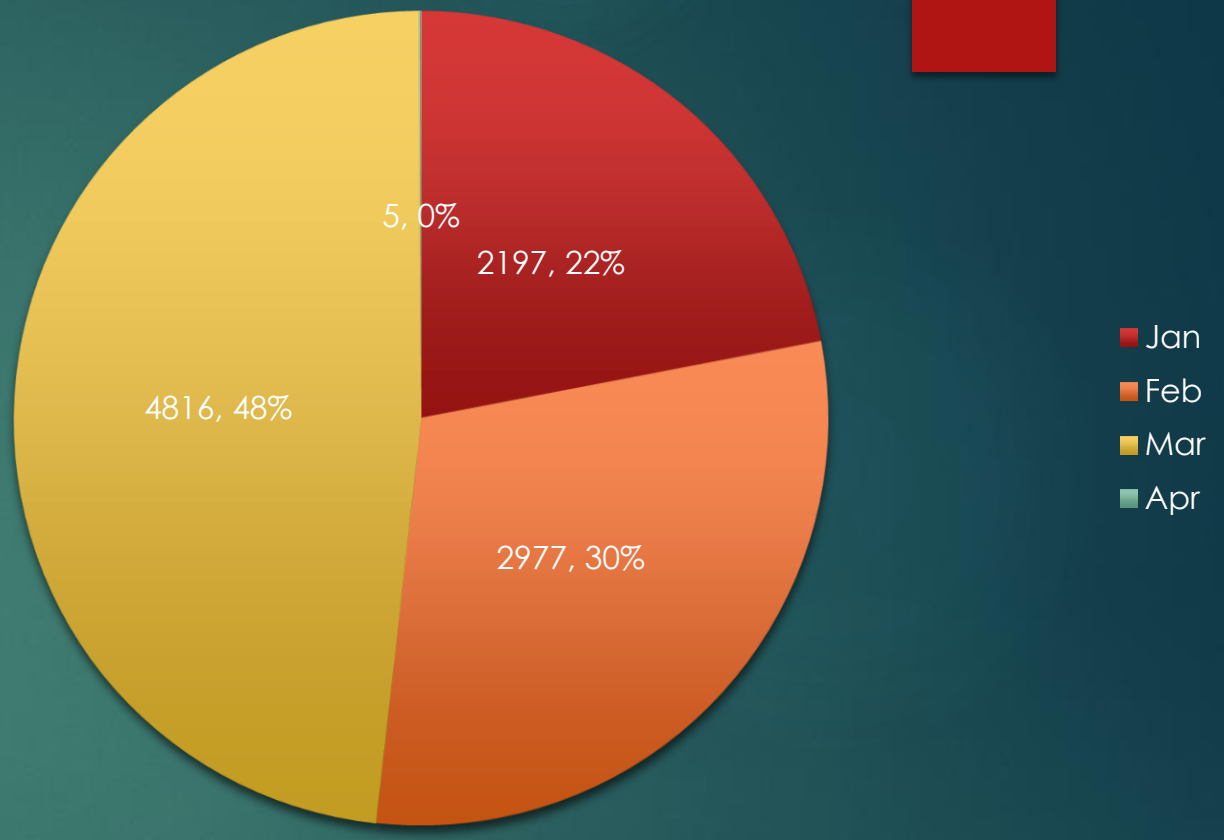


User per province

- Gauteng province is leading with 3749 users ,followed by the Western Cape with 1866 then Kwazulu Natal (1034) as provinces with the most users.
- Northern Cape(234), Free State(301), and North West (353) have the lowest number of users recorded in the period under review.
- There 789 users who did not specify the province that they belong .



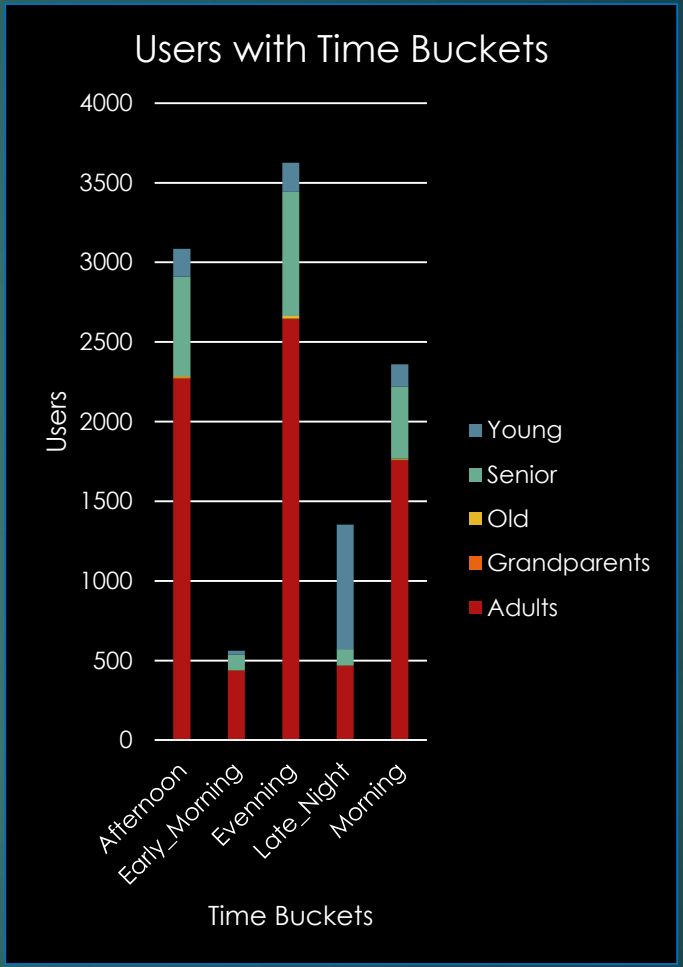
Month	Users
January	2197
February	2977
March	4816
April	5



-The month of March has been the month with many users at 40% company to the others followed by February.
-January was the least month with 22% April doesn't fall in that category as some moved there because of the time conversion.

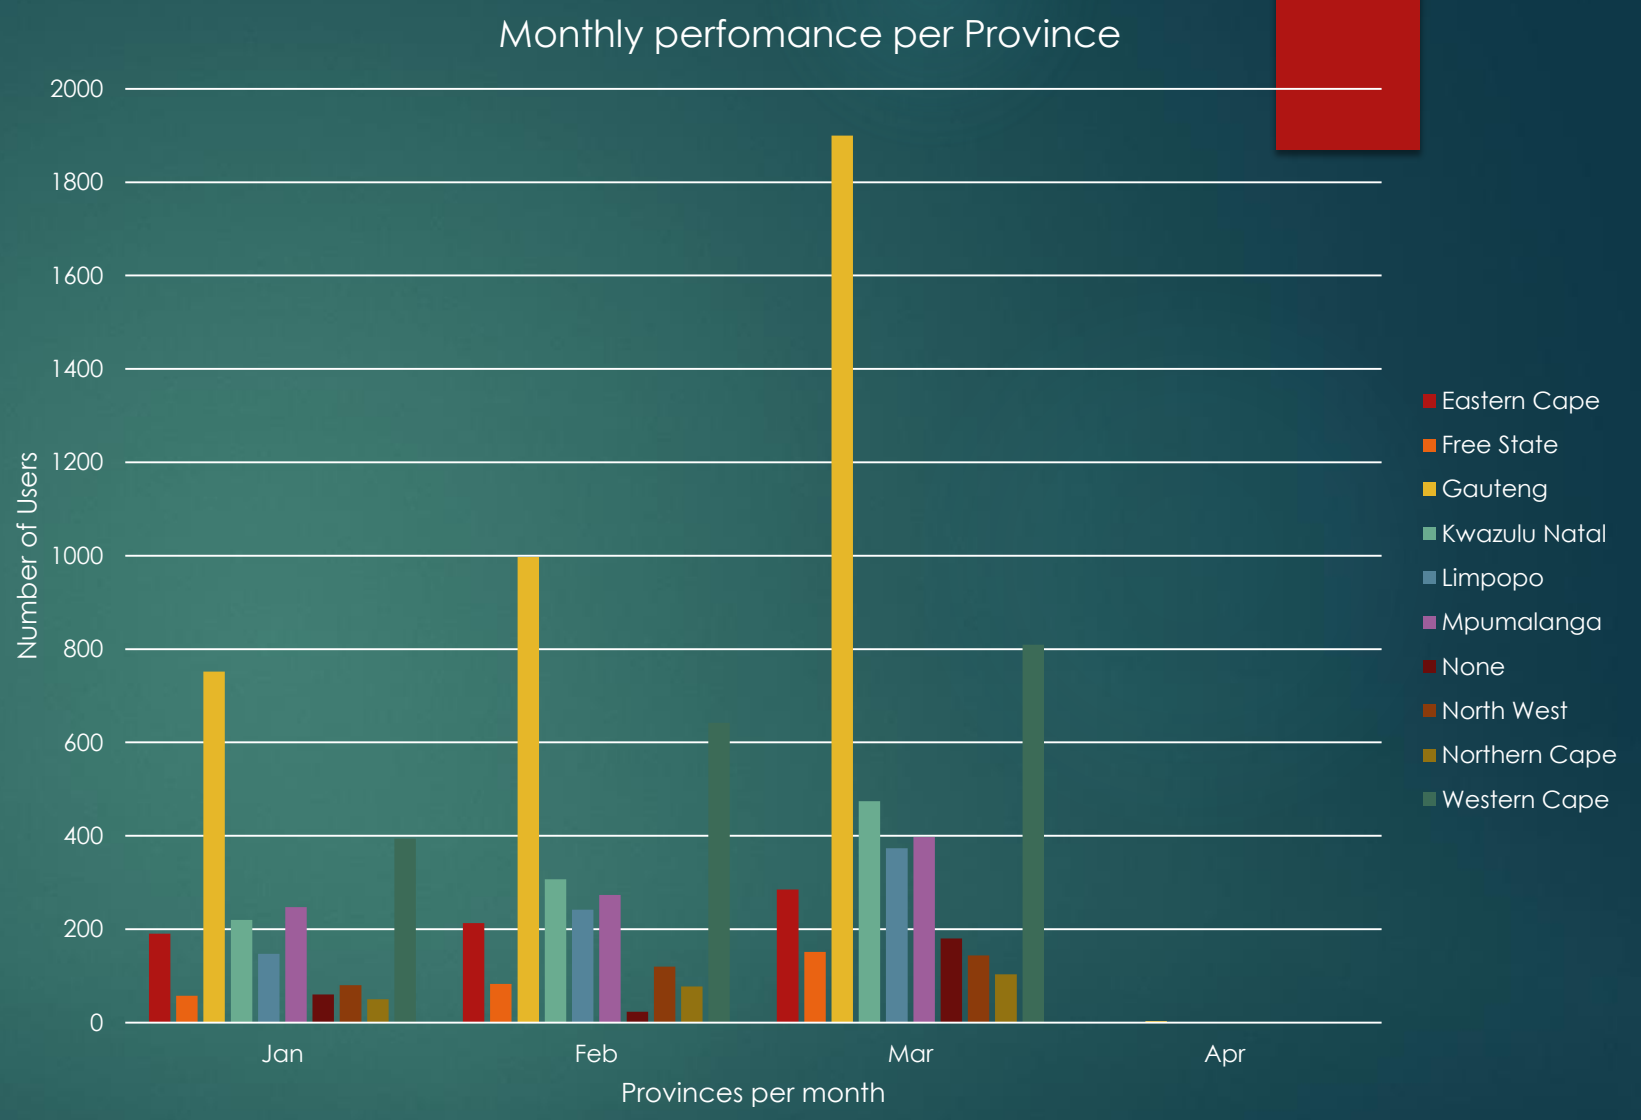
User time buckets

- Looking at the graph we find that adults enjoy consuming content in the evening which is programming around the times of 17:00pm to 23:pm
- Senior users do consume or view tv almost equally across the entire day except for early mornings and late nights
- Young users seem to enjoy or consume content falling in the times of late night with above 23:00pm

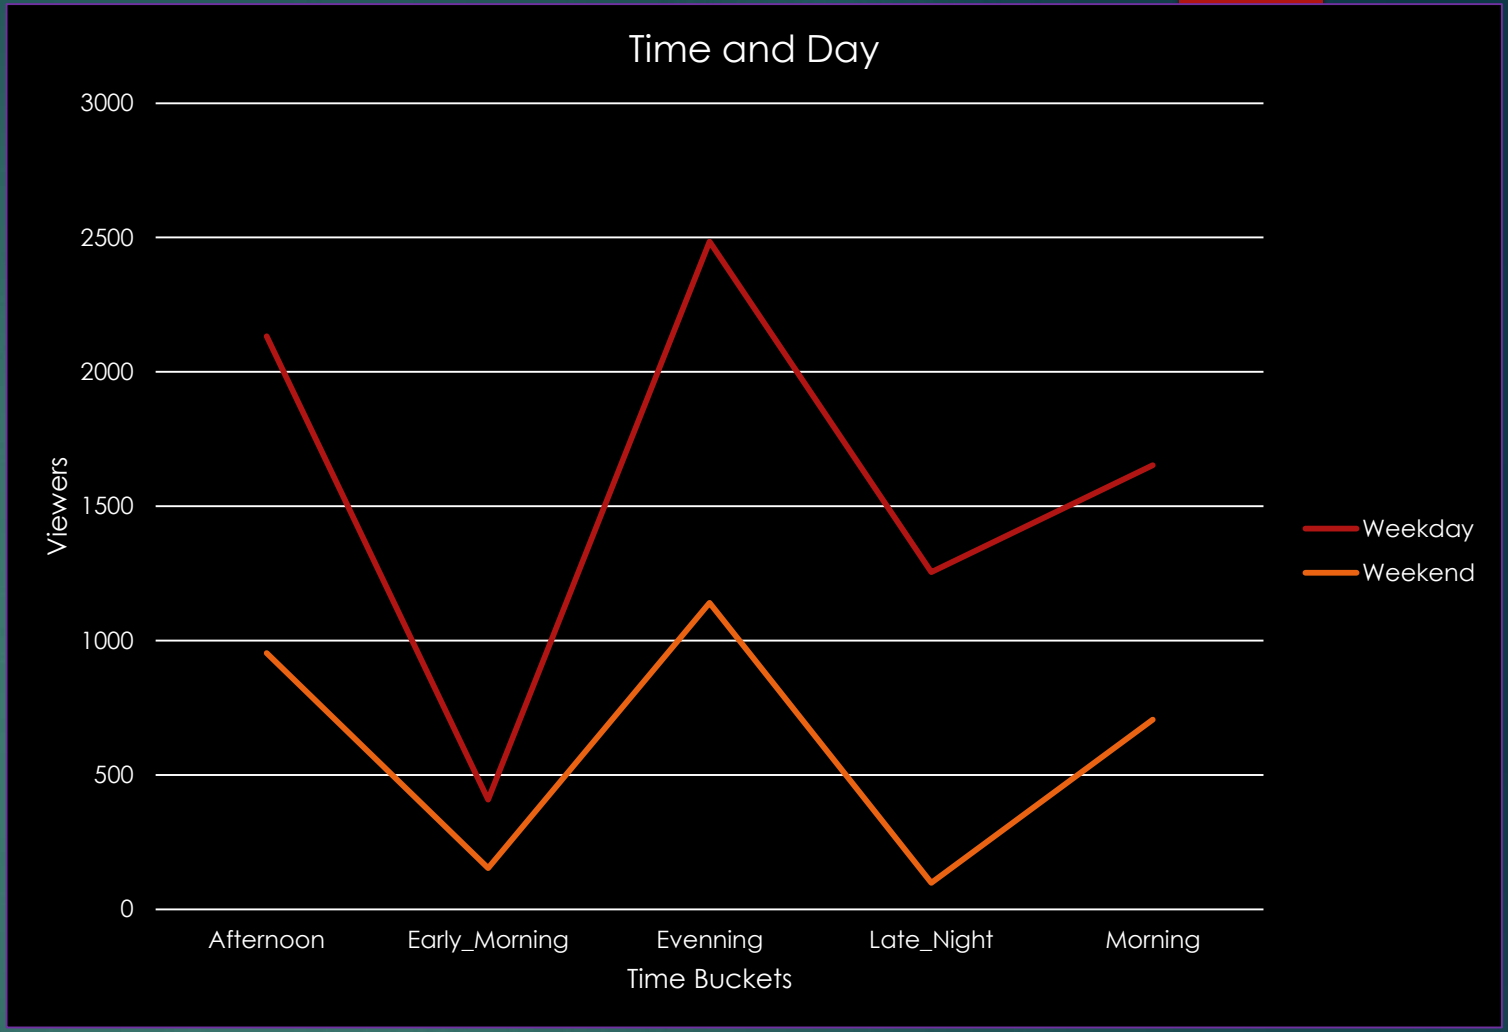


Monthly performance per province

- In the three month period Gauteng and Western Cape had more viewership or users compared to the other provinces
- The month of January was the month where all province did not have many user as no province passed the 800 mark compared to the other provinces.
- The North West, Free State and Northern Cape performed poorly in the first month but they were recovering gaining more users in March .



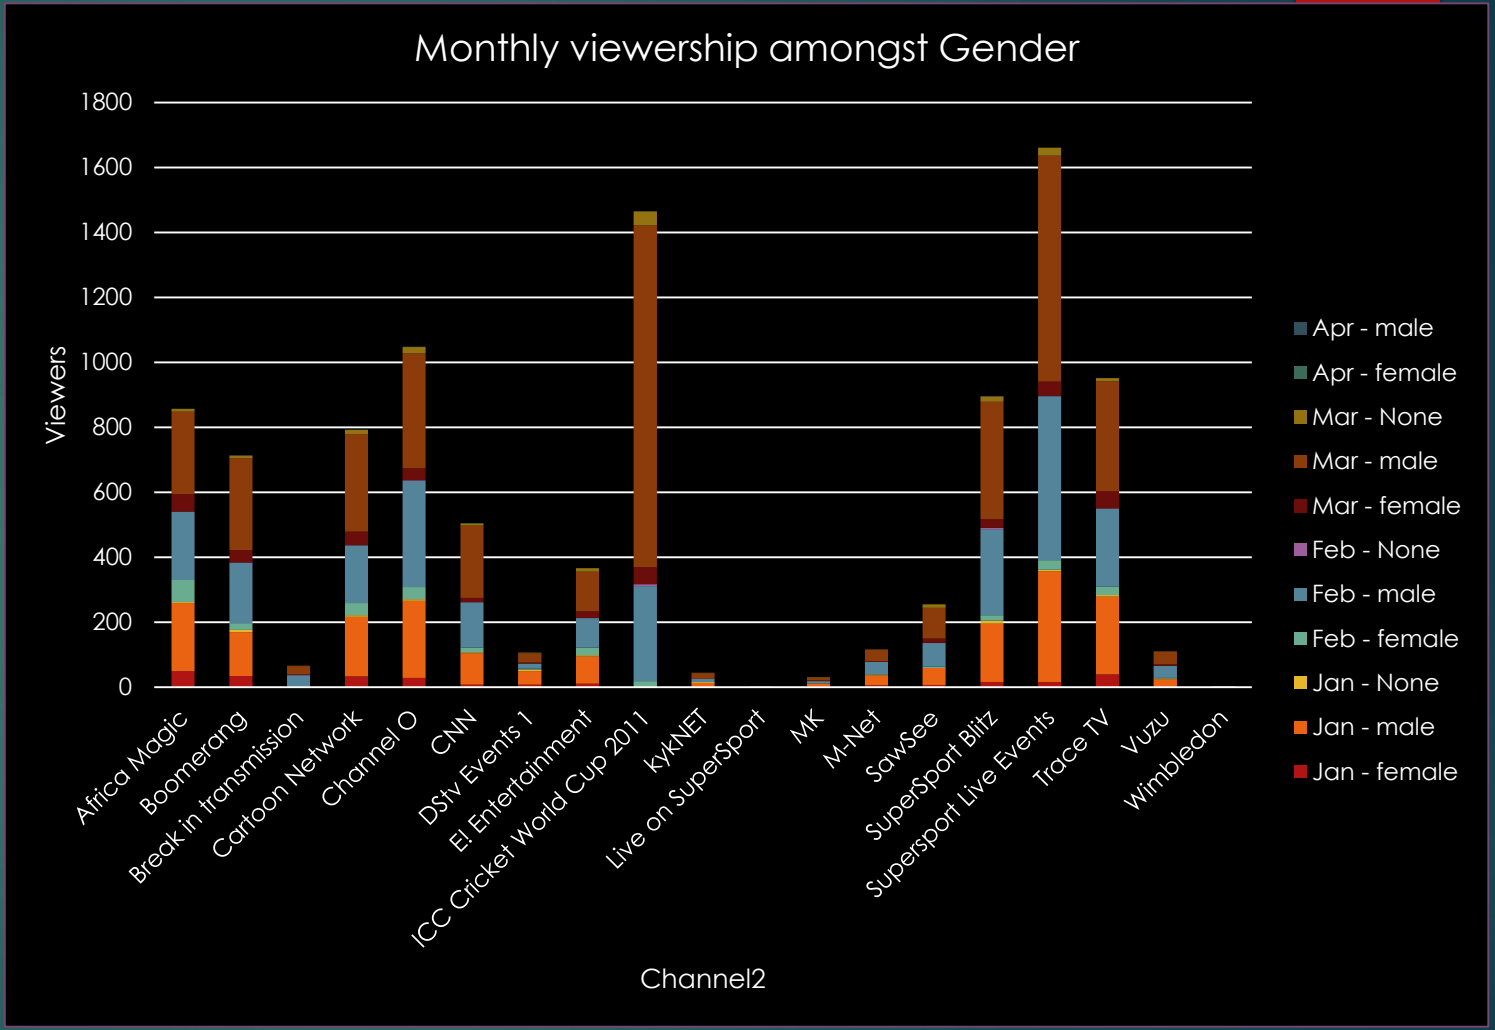
Time Buckets	Weekdays	Weekends
Afternoon	2132	954
Early Morning	408	153
Evening	2485	1140
Late Night	1255	98
Morning	1653	706



-On weekday the has been a more trend on all the time buckets peaking with evening viewership of 2485 users consuming the content.
-On weekends, afternoons and evenings has seen has trended up with early mornigs and late night seeing low performance

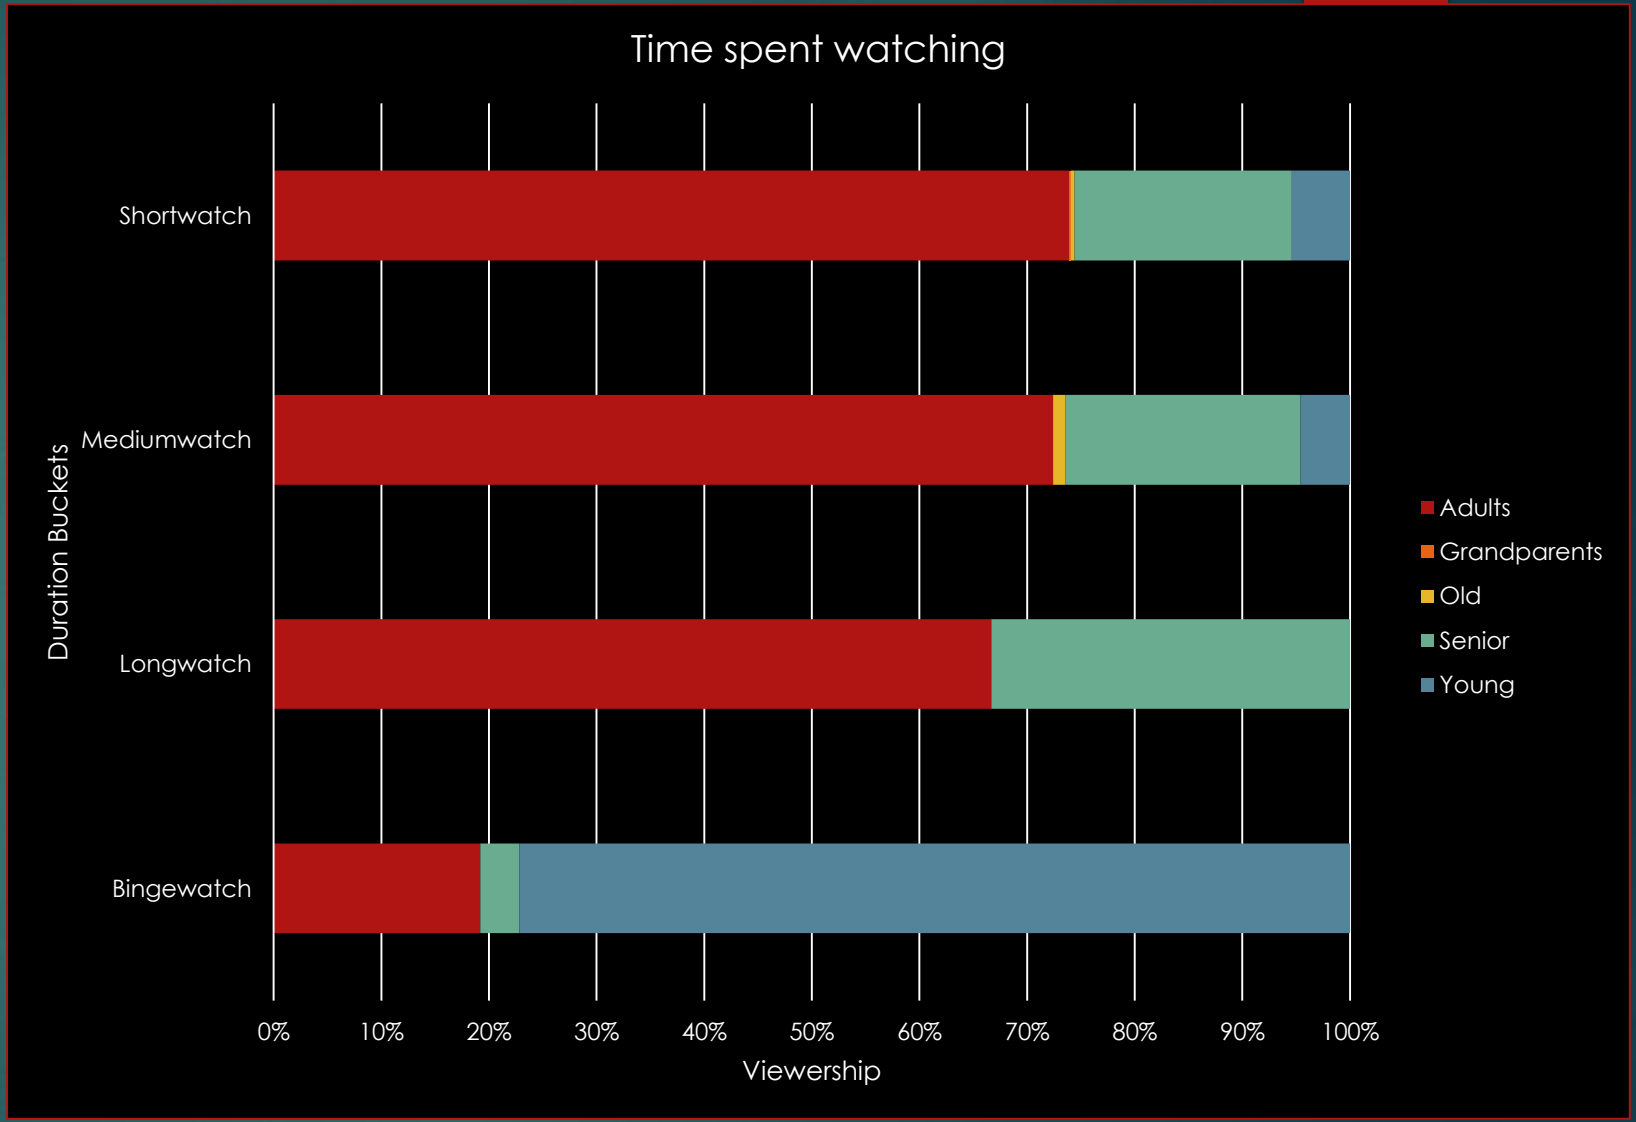
Monthly viewership amongst Genders

- In both sports shows and the world cup were consumed mainly by males across three months
- Females in February seem to have a consumed African Magic, Cartoons, Channel O as well.
- Kyknet, Vuzu, MK have had the least visit or views on record for the period we are reviewing along with Wimbledon,
- Males through out each month have had high viewership



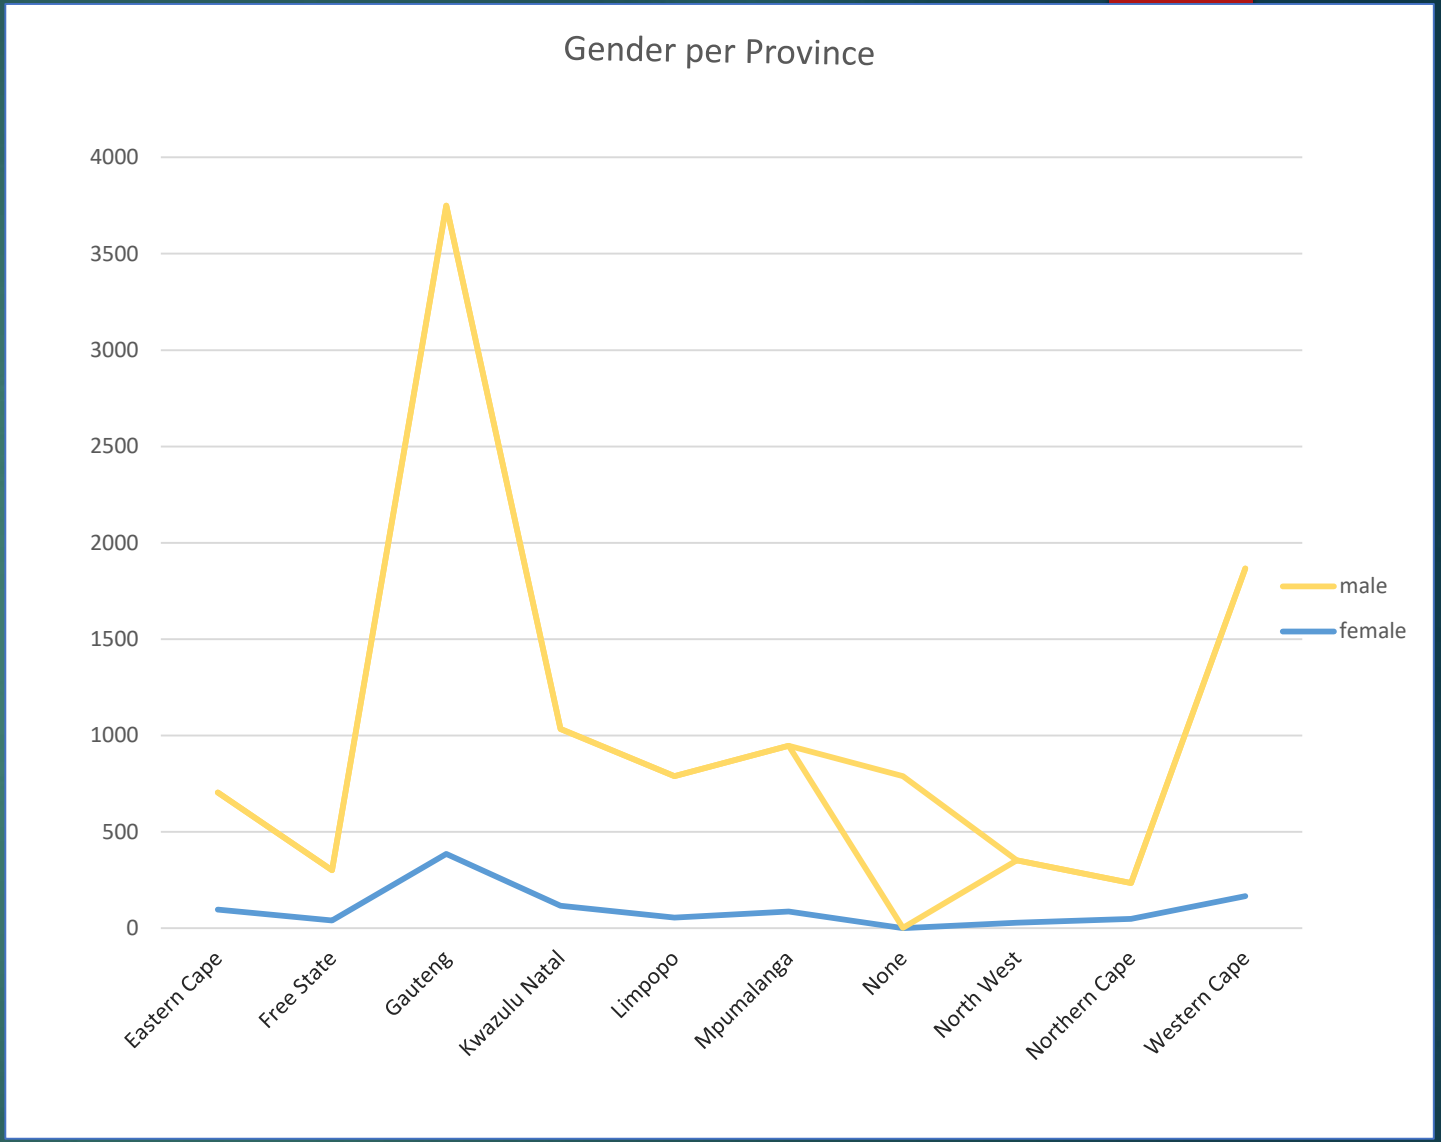
Time spent watching

- Users falling in the young category seems to enjoy Binge watching compared to the other age classifications these are more than 6 hours duration shows
- Seniors have consumed each duration bucket equally with long watch take slight advantage these are programs with a duration up to 5 hours
- Adults have consumed more short watch and medium watch then followed by long watch but the was a deep in Binge watch
- From the graph old and grandparents users do not really consume much tv.



Gender performance per province

- Gauteng is leading more males that other provinces and the females as well are doing well.
- In all provinces women have not performed well



Daily performance of time buckets

- The evening time slot have consistently performance everyday of the week except for Wednesday where the afternoon buckets performed better.
- Late nights everyday of the week are not performing good

What type of factors influence consumption?

- The three lowest performing provinces who have low number of users that Free State, North West and Northern Cape can be influenced by bad economy and low population.
- The programs/shows that play late at night which lead to seniors, and old people not to consume Channel2 could be influences by that it's not their target audience.
- School holidays can be a factor why young people until it's late at night.
- Gauteng, Western Cape and Kwazulu Natal are the economic hubs of the country so the high number of user can be influenced by that
- Adults are working as well, the results of their afternoon time buckets performance can be influenced by that
- Males subscribing because they want to watch sports
- People are off at work on weekends so some spend more times viewing Bright TV

What content would you recommend to increase consumption on the days with low consumption?

- In days of low consumption the TV needs low dedication but high-interest content
- I would recommend adding more live sports events
- Play more local content like reality tv shows and drama repeats
- I would suggest special broadcast e.g investigative documentaries or sports documentary series
- Play newly released content to spark interest on the viewers
- Repeats of sports matches, retro drama series

What type of initiatives would you recommend to further grow BrightTV ‘s User base.

- Optimize mobile experience for quick viewing and TV for long-form content.
- Strong social media clips driving traffic back to full content
- Must-watch local content
- Close the gender gap (biggest single opportunity) – through drama or telenovelas
- Launch a "Her Pick" curated rail in-app and a free 30-day trial promoted via cosmetics/retail co-marketing.
- Add a family/kids profile so mothers signing up for kids also become primary viewers.
- Geo-targeted Facebook/TikTok campaigns for NC, FS, NW, Limpopo and Mpumalanga.
- "Sunday Movie Night" tent-pole event to drive a weekend appointment-viewing habit.
- Introduce a continue-watching ribbon and auto-play next episode by default.
- For Seniors easy-mode UI: bigger fonts, simplified remote-style navigation, one-tap "watch news" / "watch classics".
- In addressing the “none”, Do mandatory but lightweight profile completion at sign-up (gender, province, DOB) with a small reward.
